

Innovations in our insert program

Reduce tooling costs by utilizing inserts with increased performance!

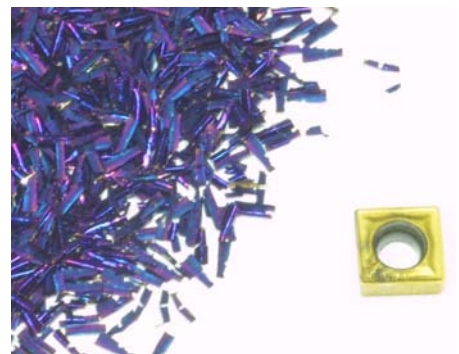

We are happy to announce the new peripheral ground insert design with significantly improved cutting performance which will replace our previous offering: **SCMT 060204 EN** :

SCGT 06020R EN / SCGT 06020R FN **R = 0.008" / 0.016"**

The precision-ground, optimized cutting edge geometry allows for a remarkable reduction of cutting forces and heat, as shown in the following photos:

SCGT 060204 EN DC15
Material: 1.2343 / dry

SCMT 060204 EN DC15
Material: 1.2343 / dry

The significantly lower load on the cutting edge allows for longer tool life, resulting in considerably reduced downtime as well as tooling costs.
